PROFESSIONAL SUMMARY

Full-stack software engineer and Master's in Computer Science candidate at CU Boulder. Passionate about building robust, scalable systems. Experienced in developing production-grade web applications and real-time systems using TypeScript, Python, and SQL, with a focus on system optimization and data-integrated solutions.

EDUCATION

University of Colorado Boulder <i>Master of Science in Computer Science.</i>	Boulder, CO June 2026 - Present
University of Colorado Boulder <i>BA Business Analytics, BA Information Systems Management, Computer Science Minor.</i>	Boulder, CO August 2022 - May 2026

EXPERIENCE

Administrative Assistant Intern, Commercial Real Estate Development <i>ESSESA</i>	Summers 2024 – 2026 <i>San Salvador, El Salvador</i>
- Consolidated construction site data and CAD information in Excel to build expense forecasting models across project phases. - Participated in financial and architectural planning meetings, gaining direct exposure to stakeholder decision-making and negotiation. - Architected and deployed an automated Odoo pipeline that optimized internal workflows, reducing a manual 10-person operation into an efficient 4-step digital process.	
Sales Associate <i>The Home Depot</i>	June 2021 – July 2022 <i>Shawnee, KS</i>
Sales Associate <i>Chipotle</i>	June 2020 – July 2021 <i>Shawnee, KS</i>

PROJECTS

Promptr: Prompt Engineering AI Assistant promptrlabs.com <i>Personal Venture</i>	September 2025 – December 2025
- Built and launched a Google Chrome extension to streamline user AI interactions. - Designed a scalable full-stack platform using TypeScript with a custom backend, implementing user authentication, subscription management, and usage tracking via Supabase. - Integrated Stripe for secure payment processing and subscription lifecycle management. - Designed and implemented AI API workflows to analyze user prompts and generate structured feedback and refined outputs. - Deployed and hosted production services using Docker containers on DigitalOcean (unix based) cloud servers.	
Multiplayer 3D Web Game (In Development) <i>Personal Venture</i>	April 2025 – October 2025
- Engineered a highly available multiplayer server architecture using Nakama, Go, and PostgreSQL with server-validated game state. - Developed a real-time 3D client using Three.js and React, solving complex rendering and collision challenges through Rapier physics-engine integration. - Implemented player authentication, persistent state storage, and deterministic server-side game logic.	
Home Server and Self-Hosted Infrastructure <i>Personal Project</i>	Ongoing
Configured and maintained a personal Linux home server, managing backups, live syncing and network access remotely via Tailscale VPN.	

SKILLS

Programming Languages: TypeScript, JavaScript, Python, C++, SQL, R
Frameworks and Libraries: React, Three.js, Nakama, Supabase, PostgreSQL, REST APIs
Scalable Systems, Platforms & Tools: Git, Linux (Ubuntu/Debian), Docker, DigitalOcean, Tailscale VPN, Nakama, Go, Self-hosted infrastructure, Bash scripting,
Financial Data & Analytics: SQL (PostgreSQL), Python (NumPy, Pandas), R, Business Analytics, Information Systems, Excel, SAP S/4 HANA
Other: AI-assisted development, Prompt engineering, Full-stack development, Self-hosted infrastructure
Languages: English, Spanish
