Professional Summary

Full-stack software engineer and CU Boulder M.S. Computer Science student with a Strong Business Analytics background. Built and launched Promptr, a Chrome extension with subscription billing and AI API workflows, and a real-time multiplayer 3D game with server-validated state. Seeking a position to leverage my expertise to build production-grade software.

Skills

Programming & Frameworks: TypeScript, Python, C++, SQL, React, Three.js, Nakama, Supabase, PostgreSQL, REST APIs

Scalable Systems, Platforms & Tools: Git, Linux, Docker, DigitalOcean, Tailscale VPN, Self-hosted infrastructure, Bash scripting

Data & Analytics: NumPy, Pandas, R, Business Analytics, Information Systems, Excel, SAP S/4 HANA

Languages: English and Spanish (bilingual)

Education

University of Colorado Boulder — Boulder, CO
Master of Science in Computer Science. — *August 2026 - Present*

University of Colorado Boulder — Boulder, CO
BA Business Analytics, BA Information Systems Management, Computer Science Minor. — *August 2022 - May 2026*

Projects

Promptr: Prompt Engineering AI Assistant promptrlabs.com — September 2025 – December 2025
Personal Venture

- Architected and deployed a Google Chrome extension to streamline user AI interactions, engineering a scalable full-stack platform using TypeScript with a custom backend, implementing user authentication, subscription lifecycle management via Stripe, and usage tracking via Supabase.
- Architected and deployed AI API workflows to analyze user prompts and generate structured feedback and refined outputs.
- Deployed and hosted production services using Docker containers on (unix based) DigitalOcean cloud servers.

Multiplayer 3D Web Game — April 2025 – October 2025
Personal Venture

- Engineered a multiplayer server architecture using Nakama, Go, and PostgreSQL with server-validated game state.
- Developed a real-time 3D client using Three.js and React, solving complex rendering and collision challenges through Rapier physics-engine integration.
- Implemented player authentication, persistent state storage, and server-side game logic.

Home Server and Self-Hosted Infrastructure — Ongoing
Personal Project

- Configured and maintained a personal Linux home server, managing backups, live syncing and network access remotely via Tailscale VPN.

Experience

Administrative Assistant Intern, Commercial Real Estate Development — Summers 2024 – 2026
ESSESA — *San Salvador, El Salvador*

- Consolidated complex construction site data and CAD information in Excel to build expense forecasting models across project phases.
- Collaborated in financial and architectural planning meetings, gaining direct exposure to stakeholder decision-making and negotiation.
- Architected and built a prototype of an automated Odoo pipeline that optimized internal workflows, reducing a manual 10-person operation into an efficient 4-step digital process.

Sales Associate — July 2021 – July 2022
The Home Depot — *Shawnee, KS*

Sales Associate — April 2020 – June 2021
Chipotle — *Shawnee, KS*
